WHO WE ARE?

Dynamic African Mining & Energy is a reliable and trusted supplier to the mining and energy processing industry.

In collaboration with our world class manufacturing partners, Dynamic African Mining & Energy offers mining reagents and process aids, as well as technical services and support to help overcome challenges in this market.

Our strategy is underpinned by our commitment to internationally recognised best practice principles of sustainable development and continuous improvement.

We value the health and safety of our employees, our host communities and other stakeholders.

Always conducting our business with the utmost integrity. Mutual respect between everyone within the organisation and those with whom we interact during the execution of our duties. Operational excellence and continuous improvement.

Open and honest communication with our employees, our communities and other relevant stakeholders.

OUR MISSION & VISION

At Dynamic African Mining & Energy, our vision is as simple as this: we want to make a positive impact on the world. We aim to power better lives in Africa and beyond by responsibly investing in commodities that will sustain life on the continent.

This goal is being realised by supplying basic and primary needs, the things that keep us functioning as a society, through energy, water, and food. We manage to do all this through our primary commodity – coal – which we are using to fuel our future. Through our growth and innovation, we are working towards becoming an unstoppable source of endless possibilities.

We know none of this is possible without our people. Their imagination and passion is what constantly nourishes our journey to change the world for the better.

Dynamic African Mining & Energy encourages collaboration, commitment and creativity in an environment that promotes safety, health, and welfare – and where respect and equality are prerequisites. We know that our highly qualified workforce will become the industry leaders of tomorrow.

“START WITH THE DREAM,
GROW WITH PASSION”

OUR SAFETY

Dynamic African Mining & Energy believes that safety is one of the core foundations of the mining industry - where extensive care needs to be taken to ensure the safety of all staff members.

Our safety record has been achieved as a result of Dynamic African Mining & Energy enforcing stringent safety mechanisms, which are used to avoid any incidents that infringe on safety.

These include; regular operational updates by management to mine workers, stringent PPE allocations for all staff members, annual medical examinations for all mine workers, and an induction programme

introducing staff members to the various hazards and related processes at the mine.

What's more, Dynamic African Mining & Energy is committed to ensuring that the company complies with numerous requirements set out by the Department of Mineral Resources (DMR), by appointing a team of highly qualified engineers, who are experts in ensuring that DMR regulations are strictly adhered to.

“SAFETY FIRST
IS SAFETY ALWAYS”

OUR SOCIAL RESPONSIBILITY

As a responsible corporate citizen, Dynamic African Mining & Energy is involved in the rehabilitation of mined land, with a core focus on saving and recycling water & energy.

Dynamic African Mining & Energy is currently using excess water to process coal at its wash plant. Once the pits are completely drained of excess water, the land will then be filled and restored to its original form.

As part of its empowerment drive, Dynamic African Mining & Energy actively employs residents of Johannesburg and the surrounding areas at its Gauteng plant.

Another community development initiative is the establishment of two community projects where Dynamic African Mining & Energy has assisted the local community in setting up SMMEs, which are servicing the mine as contractors offering cleaning, laundromat and catering services.

Dynamic African Mining & Energy is committed to nurture and grow these projects with the objective to empower the communities in which the business operates.
